5678312S

5678312SG

12-Port, 65°, XPOL, Panel Antenna, Variable Tilt, 2000 mm

- Hexa band antenna, Dual polarisation, 12 connectors
- Independent tilt on each band 2-12° / 2-12° / 2-12° / 2-12° / 2-12° / 2-12°
- MET and RET versions, 3GPP/AISG2.0, in multiple single RET (multiple device type1) or in Multi-RET (device type 17, with firmware above MD3.10).
- Our patented, RET module controlling all tilt angles, fully inserted inside the antenna (field replaceable)

ELECTRICAL DOWNTILT CONTROL

For multiband antennas, electr	For multiband antennas, electrical downtilt for each band can be controlled separately.						
Manual Electrical Tilt (MET) Control	to the corresponding connector color. The manual filt, override, function is always available with no need to remove the						
Remote Electrical Tilt (RET) Control	The remote control of the electrical tilt is managed by a Multi-Device Control Unit (MDCU) or a Multi-Device Dual Unit (MDDU) inserted in the bottom of the antenna. See details below and refer to the ordering options to see which actuators are available with this particular antenna. A single actuator individually controls the tilt of each band (no need for daisy chain cables between the bands). This module does not add any additional length to the antenna.						

RET ACTUATOR

Amphenol's RET-READY antennas are delivered with the RET Actuator already installed and pre-commissioned with all antenna parameters. Every RET device is factory configured and calibrated so the antenna is ready to be used once delivered to the site which means that there is no need for further installation of RET devices or for programming their configuration or for running a calibration process.

RET-READY ACTUATORS

Multi-Device Control Unit (MDCU). The MDCU is an electronic module that allows the remote control of the electrical downtilt (RET) in Amphenol antennas with factory embedded motors. The MDCU is factory installed. Refer to the ORDERING OPTIONS for availability with this model.

Multi-Device Dual Unit (MDDU). The MDDU allows two separate RET Controllers to independently drive the RETs in antennas with factory embedded motors (for antenna sharing or two technologies). The MDDU is factory installed. Refer to the ORDERING OPTIONS for availability with this model.

Number of RET-READ	Y Actuators	One per antenna		
Input Voltage		+10 to +30 V		
Power Consumption Idle State (AISG P1)		0.5 W		
	High Power Mode (AISG P2)	3 W		
Protocol		3GPP/AISG 2.0		
Tilt Change Duration		Less than 15 seconds, typical (may vary dependent on antenna type and outdoor temperature)		
Precision		± 0.5°		
Tilt Change Capability		50,000 minimum		
DET.L. (MDCU	One pair of AISG Male and Female (type IEC60130-9)		
RET Interface	MDDU	Two male AISG 8 pin connectors (type IEC60130-9 Ed 3.0)		
Field Replaceable Unit		Yes
