3-Band, 6-Port, $65^{\circ}$, XPOL, Panel Antenna, Variable Tilt, 2683 mm

## TwinLine

- Tri band antenna, dual polarisation, 6 connectors
- Independent tilt on each band 0-10 $/ 0-10^{\circ} / 0-10^{\circ}$
- Lightweight TwinLine ${ }^{\text {TM }}$ platform and low windload
- MET and RET versions, 3GPP/AISG2.0, in multiple single RET (multiple device type1) or in Multi-RET (device type 17, with firmware above MD3.10).
- Our patented, RET module controlling all tilt angles, fully inserted inside the antenna (field replaceable)

## ELECTRICAL DOWNTILT CONTROL

For multiband antennas, electrical downtilt for each band can be controlled separately. Tilt indicator(s) are covered by removable transparent cap(s).

Manual Electrical Tilt (MET) Control

Remote Electrical Tilt (RET)
Control

A colored knob at the end of the tilt indicator allows change of the tilt without need of a tool. The knob color is identical to the corresponding connector color. To access the knob, remove the cap by turning it counter-clockwise. It is re-installed by opposite rotation. Do not remove the transparent cap(s) from the antenna. The manual tilt 'override' function is always available with no need to remove the physical RET motor. Do not remove the transparent cap(s) from the antenna.

The remote control of the electrical tilt is managed by a Multi-Device Control Unit (MDCU) or a Multi-Device Dual Unit (MDDU) inserted in the bottom of the antenna. See details below and refer to the ordering options to see which actuators are available with this particular antenna. A single actuator individually controls the tilt of each band (no need for daisy chain cables between the bands). This module does not add any additional length to the antenna. For RET control, the transparent caps must be in place and locked. The tilt angle indicators always remain visible and the antenna still has manual tilt control (manual override). Do not remove the transparent cap(s) from the antenna.

## RET ACTUATOR

Amphenol's RET-READY antennas are delivered with the RET Actuator already installed and pre-commissioned with all antenna parameters. Every RET device is factory configured and calibrated so the antenna is ready to be used once delivered to the site which means that there is no need for further installation of RET devices or for programming their configuration or for running a calibration process.

## RET-READY

 ACTUATORSMulti-Device Control Unit (MDCU). The MCDU is an electronic module that allows the remote control of the electrical downtilt (RET) in Amphenol antennas with factory embedded motors. The MDCU is factory installed. Refer to the ORDERING OPTIONS for availability with this model.

Multi-Device Dual Unit (MDDU). The MDDU allows two separate RET Controllers to independently drive the RETs in antennas with factory embedded motors (for antenna sharing or two technologies). The MDDU is factory installed. Refer to the ORDERING OPTIONS for availability with this model.

| Number of RET-READY Actuators |  | One per antenna |
| :---: | :---: | :---: |
| Input Voltage |  | +10 to +30 V |
| Power Consumption | Idle State (AISG P1) | 0.5 W |
|  | High Power Mode (AISG P2) | 3 W |
| Protocol |  | 3GPP/AISG 2.0 |
| Tilt Change Duration |  | Less than 15 seconds, typical (may vary dependent on antenna type and outdoor temperature) |
| Precision |  | $\pm 0.5^{\circ}$ |
| Tilt Change Capability |  | 50,000 minimum |
| RET Interface | MDCU | One pair of AISG Male and Female (type IEC60130-9) |
|  | MDDU | Two male AISG 8 pin connectors (type IEC60130-9 Ed 3.0) |
| Field Replaceable Unit |  | Yes |

[^2] operational conditions and/or stress on structural supports is beyond our control. Such conditions may result in damage to this product. Improvements to products may be made without notice.

| Kit to add mechanical tilt $\left(0^{\circ}\right.$ to $\left.10^{\circ}\right)$ to above brackets optional | $0900397 / 00$ | $3.0 \mathrm{~kg}(6.6 \mathrm{lbs})$ |

Wall mounting brackets are available upon request

INSTALLATION Please read all installation notes before installing this product.

Always attach the antenna by all mounting points.
Do not install the antenna with the connectors facing upwards.
Do not cut the tethered transparent cap(s) that cover the antenna's tilt adjustment indicator(s).

In order to operate the RET control, the transparent cap(s) covering the tilt adjustment indicator(s) must be engaged and locked.

Dimensions shown in mm
