| 3-Band, 18-I | Port, 65°, XPC | DL, Tri-Sector Antenna, Variable Tilt, 2325 mm |

- Tri band, tri-sector antenna, 18 connectors
- Independent tilt on each band 2-10° / 0-10° / 0-10°
- Independent azimuth panning ±15° on each sector
- MET and RET versions, 3GPP/AISG2.0
- Our patented, RET module controlling all tilt angles, fully inserted inside the antenna (field replaceable)

Quoted performance parameters are provided to offer typical, peak or range values only and may vary as a result of normal testing, manufacturing and operational conditions. Extreme operational conditions and/or stress on structural supports is beyond our control. Such conditions may result in damage to this product. Improvements to products may be made without notice.

# 6878303 6878303N 6878303G 6878303NG 3-Band, 18-Port, 65°, XPOL, Tri-Sector Antenna, Variable Tilt, 2325 mm

## ELECTRICAL DOWNTILT CONTROL

| For multiband antennas, electrical downtilt for each band can be controlled separately. Tilt indicator(s) are covered by removable transparent cap(s). |   |  |  |  |  |  |
|--|---|--|--|--|--|--|
| Manual Electrical Tilt (MET)<br>Control  | A colored knob at the end of the tilt indicator allows change of the tilt without need of a tool. The knob color is identical to the corresponding connector color. To access the knob, remove the cap by turning it counter-clockwise. It is re-installed by opposite rotation. <b>Do not remove the transparent cap(s) from the antenna.</b>  |  |  |  |  |  |
| Remote Electrical Tilt (RET)<br>Control  | The remote control of the electrical tilt is managed by a Multi-Device Control Unit (MDCU) or a Multi-Device Dual<br>Unit (MDDU) inserted in the bottom of the antenna. See details below and refer to the ordering options to see<br>which actuators are available with this particular antenna. A single actuator individually controls the tilt of each<br>band (no need for daisy chain cables between the bands). This module does not add any additional length to the<br>antenna. For RET control, the transparent caps must be in place and locked. The tilt angle indicators always remain<br>visible and the antenna still has manual tilt control (manual override). <b>Do not remove the transparent cap(s) from<br/>the antenna.</b> |  |  |  |  |  |

### **RET ACTUATOR**

Amphenol's **RET-READY** antennas are delivered with the RET Actuator already installed and pre-commissioned with all antenna parameters. Every RET device is factory configured and calibrated so the antenna is ready to be used once delivered to the site which means that there is no need for further installation of RET devices or for programming their configuration or for running a calibration process.

RET-READY ACTUATORS Multi-Device Control Unit (MDCU). The MCDU is an electronic module that allows the remote control of the electrical downtilt (RET) in Amphenol antennas with factory embedded motors. The MDCU is factory installed. *Refer to the* ORDERING OPTIONS for availability with this model

Multi-Device Dual Unit (MDDU). The MDDU allows two separate RET Controllers to independently drive the RETs in antennas with factory embedded motors (for antenna sharing or two technologies). The MDDU is factory installed. *Refer to the* ORDERING OPTIONS for availability with this model.

| Number of RET-READY Actuators |              | One per antenna   |  |  |
|-------------------------------|--------------|---|--|--|
| Input Voltage                 | +10 to +30 V |   |  |  |
| Power Consumption Idle State  |              | 0.5 W   |  |  |
|                               | Operating    | 4 W typical / 10 W maximum  |  |  |

1695-2690

The 6878303 is a Tri-Sector system that contains three Tri Band antennas installed at  $120^{\circ}$  in a cylindrical shroud with  $\pm 15^{\circ}$  azimuth panning capability independent on each sector. A service area at the bottom can be opened for access to connectors and the manual adjustment of the electrical downtilt and azimuth panning. Variants can be delivered with only one or two sectors fitted.

## Mounting Flange Interface

#### Service Area (Opened Shroud)

## TRIO EXTENSION

A TRIO Extension is a short mounting (0.85 m) mast which has the same diameter (573 mm), same outside material, and same colour as the antenna. The two major advantages of the extensions are getting the antenna higher, and housing our TMA.

| Dimensions (Height x Diameter) |          | mm (in)    | 850 x Ø573 (33.5 x Ø22.6) |     |  |
|--------------------------------|----------|------------|---------------------------|-----|--|

Refer to the separate documentation on TRIO extensions for more details

Quoted performance parameters are provided to offer typical, peak or range values only and may vary as a result of normal testing, manufacturing and operational conditions. Extreme operational conditions and/or stress on structural supports is beyond our control. Such conditions may result in damage to this product. Improvements to products may be made without notice.
