

#### TRI BAND | HEX PORT | PANEL ANTENNA | XXX-POL | 69° / 65° / 65° | 15.0 / 17.2 / 17.2 DBI | VARIABLE TILT

#### **Features**

- AWS-3 Ready
- 4x4 MIMO high band compatible
- Patented internal RET actuator adds no additional length to the antenna
- Can be ordered with a Multi-Device Dual Unit (MDDU) with two separate inputs for independent control of each band

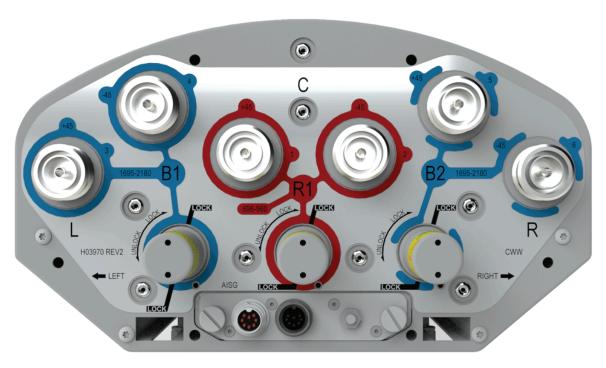

can be ordered with a material state bath of the (MDDO) with two separate inputs for independent control of each band									
Conne	ector Descripti	on							
The anter	nna has six (6) connec	tors located	at the botto	om, each marked	with a colo	red ring			
Low Band	I	■ R1		696-960 MHz		(2x) 7/16-DIN Female			
Mid Band	1id Band #1 ■ B1			1695-2180 MHz		(2x) 7/16-DIN Female			
Mid Band	lid Band #2		1695-2180 MHz			(2x) 7/16-DIN Female			
Electrical Characteristics			■ R1			■ B1 ■ B2			
Frequency Bands (MHz)		696-960 MHz			(2x) 1695-2180 MHz

#### TRI BAND | HEX PORT | PANEL ANTENNA | XXX-POL | 69° / 65° / 65° | 15.0 / 17.2 / 17.2 DBI | VARIABLE TILT

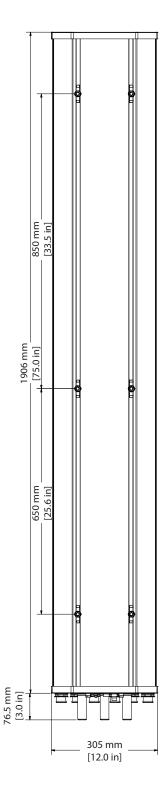

Electrical Downtilt Co	ntrol			
Manual Electrical Tilt (MET) Control	Electrical downtilt for each band can be controlled separately. A colored knob at the end of the tilt indicator allows change of the tilt without need of a tool. The knob color is identical to the corresponding connector ring color. To access the knob, remove the cap by turning it counter-clockwise. It is re-installed by opposite rotation. Do not remove the transparent cap(s) from the antenna.			
Remote Electrical Tilt (RET) Control	Electrical downtilt for each band can be controlled separately. The remote control of the electrical tilt is managed by either a Multi-Device Control Unit (MDCU) or a Multi-Device Dual Unit (MDDU) inserted in the bottom of the antenna. A single actuator individually controls the tilt of each band (no need for daisy chain cables between the bands). This module does not add any additional length to the antenna. For RE control, the transparent caps must be in place and locked. The tilt angle indicators always remain visible and the antenna still has manual tilt control (manual override).  Do not remove the transparent cap(s) from the antenna.			
RET Actuators (Units are Field Replaceable)	Multi-Device Control Unit (MDCU) An electronic module that allows the remote control of the electrical downtilt (RET) in Amphenol antennas with factory embedded motors. The MDCU is factory installed.	Multi-Device Dual Unit (MDDU) Allows two separate RET Controllers to independently drive the RETs in Amphenol antennas with factory installed motors (for antenna sharing). The MDDU is factory installed. Refer to Ordering Options for unique AISG port configirations		
		Port A Port B  Two separate inputs		
		lwo separate inputs for independent control of each band		

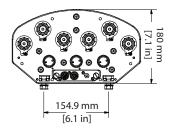

Quoted performance parameters are provided to offer typical, peak or range values only and may vary as a result of normal testing, manufacturing and operational conditions. Extreme operational conditions and/or stress on structural supports is beyond our control. Such conditions may result in damage to this product. Improvements to products may be made without notice.
