

Twin Band | Quad Port | Panel Antenna | (2x) X-Pol | 65° / 65° | 15.0 / 15.0 dBi | Variable Tilt

- Twin band, quad-port panel antenna with variable electrical tilt
- 4x4 MIMO
- Patented internal RET actuator adds no additional length to the antenna

Ordering Options	Model Number				
Vhen ordering, replace " x " in the model number with one of the options listed below.					
Manual Electrical Tilt	QUAD656C0000M				
Remote Electrical Tilt AISG v2.0 / 3GPP with an MDCU RET Actuator	QUAD656C0000G				
Remote Electrical Tilt AISG v2.0 / 3GPP with an MDDU RET Actuator	QUAD656C0000L				

Mounting bracket kits and other accessories are ordered separately.

Electrical Characteris	tics		(2x) 696-900 MHz					
Frequency Bands			696-806 MHz	2	806-900 MHz			
Polarization			(2x) ±45° (Quad-Pol)					
Horizontal Beamwidth			67°		66°			
Vertical Beamwidth			13.6°		12.4°			
Gain			14.5 dBi		15.0 dBi			
Electrical Downtilt			0-12°					
Impedance			50Ω					
VSWR			≤ 1.5:1					
Upper Sidelobe Suppression			18 dB		18 dB			
Front-to-Back Ratio			> 25 dB		> 25 dB			
Inband Isolation				25 dB				
Isolation Between Ban	ds			28 dB				
IM3 (2x20W carrier)			< -153 dBc					
Input Power				(4x) 500 W				
Total Number of Connectors			Antennas has 4 connectors located at the bottom					
Comparison Dow Dow d	é	696-900 MHz	(2x) 7/16-DIN Female					
Connectors Per Band 6		696-900 MHz		(2x) 7/16-DIN Female				
Diplexed			No					
Lightning Protection				Direct Ground				
Operating Temperature			-4	-40° to +60° C (-40° to +140° F)				
Mechanical Character	ristics							
Dimensions (Length x Width x Dep		Depth)	1889 x 520 x 182	mm	74.4 x 20.5 x 7.2	in

Twin Band | Quad Port | Panel Antenna | (2x) X-Pol | 65° / 65° | 15.0 / 15.0 dBi | Variable Tilt

trolled separately. Tilt indicator(s	s) are covered by 1	emovable tra	insparent cap(s).			
A colored knob at the end of the tilt indicator allows change of the tilt without need of a tool. The knob color is identical to the corresponding connector ring color. To access the knob, remove the cap by turning it counter-clockwise. It is re-installed by opposite rotation. Do not remove the transparent cap(s) from the antenna.						
The remote control of the electrical tilt is managed by either a Multi-Device Control Unit (MDCU) or a Multi-Device Dual Unit (MDDU) inserted in the bottom of the antenna. A single actuator individually controls the tilt of each band (no need for daisy chain cables between the bands). This module does not add any additional length to the antenna. For RET control, the transparent caps must be in place and locked. The tilt angle indicators always remain visible and the antenna still has manual tilt control (manual override).						
Select one of the following RET actuators when ordering this antenna.						
Multi-Device Control Unit (MCDU)		The MDCU is an electronic module that allows the remote control of the electrical downtilt (RET) in Amphenol antennas with factory embedded motors. The MDCU is factory installed. Refer to ordering options.				
Multi-Device Dual Unit (MDDU)		The MDDU allows two separate RET Controllers to independently drive the RETs in Amphenol antennas with factory installed motors (for antenna sharing). The MDDU is factory installed. Refer to ordering options.				
In order to operate RET control, the transparent caps covering the tilt adjustment indicators must be engaged and locked. Do not cut them from the antenna.						
Do not install the antenna with the connectors facing upward.
